

BEA AquaLogic Service Bus 3: Design & Integrate Services for SOA

What you will learn:

This course provides detailed, technical training on BEA AquaLogic Service Bus 3. This training provides an in-depth analysis of BEA AquaLogic Service Bus and how it can be used to create a message infrastructure for services throughout the enterprise.

Learn To:

- Use BEA AquaLogic Service Bus for Service-Oriented Architecture (SOA)
- Architect a message infrastructure across enterprise applications
- Integrate services with back-end applications

Audience:

- SOA Architect

Required Prerequisites:

- BEA WebLogic Server 10: Develop Enterprise Web Services

Suggested Prerequisites:

- XPath and XQuery experience
- Familiarity with essential concepts of AquaLogic Service Bus

Course Objectives:

- Understand the ALSB architecture
- Create ALSB resources
- Enrich and route messages within the Service Bus
- Validate messages
- Use common design patterns for ALSB

Course Topics:**Basics of SOA****ALSB service types****Message flow configuration****Message enrichment****Branching****Best practices with ALSB****Federated ALSB****Suggested Next Courses:**

- SOA: Architectural Concepts and Design Principles
