

Hyperion Essbase 9.3 for System Administrators

Lo que aprenderá:

This course is designed to teach you the administrative requirements of Hyperion System 9 BI+ Analytic Services. You learn how to configure the block storage and aggregate storage kernels; design and manage security; optimize system caches; and perform backup, recovery, application migration, and task automation. Exercises and a case study provide hands-on practice.

Prerequisites:

Prerequisites Requeridos:

- Basic system administration experience

Prerequisites Sugeridos:

- Hyperion Essbase Analytics 9.3 Bootcamp

Objetivos Del Curso:

- Describe the components of the Hyperion
- Describe aggregate and block storage data
- Configure the Analytic Services environment
- Set up user, group, and application access
- Modify Analytic Services cache settings
- Perform database maintenance, backup and recovery, application migration, and task automation

Temas Del Curso:

Analytic Services Overview

- Online Analytical Processing
- Hyperion Business Performance Management
- Hyperion Analytic Solution
- Administration Services Console
- Analytic Services Production Cycle
- Essbase Analytics Data Storage
- Enterprise Analytics Data Storage

Configuring the Analytic Services Environment

- eLicensing Overview
- Setting Connection Options and Disk
- Configuring Analytic Services to Run as a
- Transaction and Locking Behavior
- Gathering System Information Through Logs
- Configuring Block Storage Applications
- Configuring Aggregate Storage Applications and Analytic Server
- Configuring Smart View for Office

Securing Analytic Services in Native Mode

- Analytic Services Native Security
- Managing Users in Native Security
- Security Layers
- Security Roles and Permissions
- Creating User and Group Profiles
- Application Access Type Security
- Creating and Testing Security Filters
- Resolving Security Conflicts and Permission Overlap

Securing Analytic Services in Shared Services Mode

- Shared Services Security
- Converting Analytic Services to Shared Services Security
- Managing Users in Shared Services
- User Provisioning in Shared Services
- Assigning Database Calculation and Filter Access
- External Authentication
- Single Sign-on

Optimizing the Analytic Services Environment

- Analytic Services Optimization Tools
- Setting Analytic Services Caches
- Specifying Retrieval Buffers and Data Compression
- Analytic Services Data Compression Methods
- Removing Database Fragmentation
- Restructuring Databases
- Removing Security File Fragmentation

Maintaining the Analytic Services Environment

- Managing Object Locks and User Sessions
- Backing Up and Recovering Block Storage Databases
- Migrating Applications and Databases
- Porting Applications Across Platforms
- Automating Database Processes with MaxL
